

Edit PDF text, keep the font.

PDF Textfix is a Mac app for correcting the text of your own PDFs: a wrong date on an invoice, a typo in your CV, a name in a letter. Double-click a line, type, press Return. PDF Textfix writes the change with the fonts inside the document, checks every edit before applying it, and saves the file again without the text you replaced on the page. Free to try. Your first 5 line edits save clean. After that, saved files carry a watermark until you buy once. There is no account and no subscription.

Product	PDF Textfix, a Mac app that corrects the text of your own PDFs with the fonts inside the document
